SUMMARY

DevOps-focused Software Engineer with 1 year of experience running backend systems on Linux and AWS (EC2, Lambda, S3, CloudWatch). Hands-on with Docker, Docker Compose, Git/GitHub, and shell-script automation, with log monitoring experience using Sumo Logic. Built and deployed multi-tenant SaaS and enterprise backend services, and skilled in Jenkins, Kubernetes, and Terraform for CI/CD and infrastructure automation. Looking for a DevOps / Cloud Engineer role.

EXPERIENCE

Cubexo Software Solutions *May 2025 - May 2026*
Associate Software Engineer *Indore, India*

VI — Telecom Analytics & Backend Automation

- Built and ran an automation system on Linux-based servers using FastAPI, Pandas, and Shell scripting for data ingestion, transformation, and reporting pipelines.
- Automated recurring enterprise workflows with shell scripts, reducing manual processing time and improving operational efficiency.

Harman Studio — Multi-Tenant SaaS Platform

- Architected a multi-tenant SaaS cloud infrastructure on AWS using FastAPI and GraphQL, supporting multiple independent studio tenants on shared infrastructure.
- Deployed and managed backend services on AWS EC2, including server setup, SSH key-pair access, and environment configuration.
- Managed AWS access keys and secret keys securely for service-to-service access across the platform.
- Handled domain and DNS configuration to expose the platform's endpoints.
- Integrated the Twilio API for communication workflows within the platform.
- Used AWS S3 for file and media storage, AWS Lambda for serverless tasks, and Amazon CloudWatch for logging and monitoring.

Harbinger — Enterprise Backend Services

- Developed scalable REST APIs with Django REST Framework, including authentication, authorization, and asynchronous workflows.
- Worked with AWS Lambda, MongoDB Atlas, Linux, and GitHub to automate deployments and improve infrastructure scalability.
- Used Sumo Logic for log monitoring and troubleshooting to keep backend services reliable.
- Collaborated in Agile teams using Jira and Confluence.

PROJECTS

Smart Desktop Activity Tracker GitHub

Technologies: Python, SQLAlchemy, SQLite/PostgreSQL, Windows batch scripting, Node.js, Express, React

- Built a modular, multi-threaded Python application with separate workers for keyboard, mouse, and screen monitoring, analysis, and periodic data cleanup.
- Made the app configuration-driven using a JSON config file and the `DATABASE_URL` environment variable, with automatic SQLite fallback for local runs.
- Automated environment setup with batch scripts (virtual environment creation, dependency install, database initialization).
- Added session logging with date-based data directories, plus an Express + React dashboard with npm build scripts (Vite, esbuild).

InstaBot — Browser Automation & Data Pipeline (Educational) GitHub

Technologies: Python, Django REST Framework, Celery, Redis, PostgreSQL, MongoDB, Playwright, AWS S3

- Designed a multi-module system with a Django REST backend (JWT auth), Playwright automation engine, Scrapy spiders, and an orchestrator that links all components.
- Implemented a Redis-backed rate limiter and safety module, and a multi-threaded media downloader with an S3 upload helper.
- Used Celery for asynchronous task execution; documented the architecture, API endpoints, AWS infrastructure plan, and local development flow.

TECHNICAL SKILLS

Cloud (AWS): EC2, S3, Lambda, CloudFront, Athena, Aurora, CloudWatch

Containers & Orchestration: Docker, Docker Compose, Kubernetes

CI/CD: Jenkins | Infrastructure as Code: Terraform

Linux & Scripting: Linux server administration, Shell scripting, Python, Windows batch scripting

Version Control: Git, GitHub (branching, merge/rebase, conflict resolution)

Monitoring & Logging: Sumo Logic, AWS CloudWatch

Backend & Messaging: FastAPI, Django REST Framework, GraphQL, Celery, Redis, Twilio API

Databases: PostgreSQL, MongoDB Atlas, MySQL, SQLite

Tools: Jira, Confluence

Currently Learning: GitHub Actions, AWS Networking (VPC, subnets, security groups)

EDUCATION

Devi Ahilya Vishwavidyalaya, Indore *June 2023 - April 2025*

Master of Technology in Computer Science

Relevant Coursework: Distributed Systems, Cyber Security, Machine Learning, Advanced Algorithms.

Sri Aurobindo Institute of Technology, Indore *March 2019 - May 2023*

Bachelor of Technology in Computer Science

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Cloud Computing, AWS.

CERTIFICATIONS

- AWS Certified Solutions Architect Associate course — Udemy (Stephane Maarek)
- The Complete Python Developer — Udemy (Andrei Neagoie)
